## Hazard

<b>Hazard Description</b>	Uneven ground & holes
<b>How are Persons Affected?</b>	Trip hazard and target stand stability.
<b>Level of Risk (Probability)</b>	1
<b>Level of Risk (Severity)</b>	1
<b>Level of Risk (Risk)</b>	0-8
<b>Existing Controls</b>	Prior to erecting target stands and installing safety netting at an event, a survey of the ground is necessary. Staff are trained to look for gradients that will affect target stability and also any holes and soft ground areas which could cause trip hazards. If identified alternative locations are sought for the installation.
<b>Further Controls / Action</b>	None required.

---

---

---

### KEY

Probability (P) 5=very likely, 4=likely, 3=quite possible, 2=possible, 1=unlikely

Severity (S) 5=fatal, 4=severe, 3=moderate, 2=slight, 1=negligible

Risk (R) 0-8=low risk, no action required. 9-15=medium risk, ensure adequate controls are in use. 16-25=high risk, stop operation & implement control measures

## Safety Net Check & Tensioning

## **Hazard**

**Hazard Description** Axes Exiting Safety Nets

**How are Persons Affected?** Being struck by an axe.

**Level of Risk (Probability)** 1

**Level of Risk (Severity)** 3

**Level of Risk (Risk)** 0-8

**Existing Controls** All of the safety nets are selected for the thickness of the material and hole size. Occasionally, nets can be damaged over a long period of time. This is why all nets are checked prior to and during use. Where damage has occurred zip ties are carried to close the damaged area thus returning the net to 100% integrity. Additionally, nets are tensioned via guide ropes to ensure that axes do not exit the net at ground level. This is further protected through the use of a pegging system that seals the netting at ground level. Staff are trained to look for potential weaknesses throughout gameplay.

**Further Controls / Action** Further controls include a 10m exclusion zone to the rear of the nets. If nets are deployed in connection with our events trailers they are positioned with the back of the net facing the trailer side which is caged.

Ongoing training and review.

## **Hazard**

**Hazard Description**

Injury to Hands & Feet

**How are Persons Affected?**

Our target stands are foldable for transportation. Therefore injury can occur when unfolding for erection and folding back into transportation state during take down.

**Level of Risk (Probability)**

2

**Level of Risk (Severity)**

3

**Level of Risk (Risk)**

9-15

**Existing Controls**

Stands are only erected and taken down by fully trained staff. They are taught the correct procedure sequence and tested. The use of safety gloves and wearing of steel protection boots must be worn at all times. Our target stands are checked for integrity prior to every event.

**Further Controls / Action**

None required.
